

Infix To Postfix

Coding Festivals

Algorithm

Infix To Postfix(Using Stack)

1. Expression 2nd character ")" add karay,

2. "(" Stack -1 push karay,

3. Nishe step gulan repeat hoto jagan Infix Expression-1 character maro,

(i) यदि "(" jage jagan Stack -1 push karay,

(ii) यदि operand jage jagan to postfix expression-1 add hoto

(iii) यदि operator \otimes jage jagan

→ jagan stack operator precedence $> \otimes$ jagan Stack (jage pop hoto to postfix expression add hoto,

→ यदि stack operator precedence $< \otimes$ jagan operator (\otimes) Stack-1 push hoto,

→ यदि stack operator precedence $= \otimes$ jagan Associativity (deto

• Left Associative hoto, stack operator pop hoto to postfix expression-1 add hoto,

• Right Associative hoto operator (\otimes) Stack -1 push hoto,

Algorithm

(iv) যদি ")" পাওয়া যায় তখন

→ যেহেতু "(" না পাওয়া তখন operator stack থেকে pop হবে এবং postfix expression-এ add হবে,

→ এরপর, ")" stack থেকে pop হবে এবং postfix-এ add হবে,

$a*b+c$

$\frac{o/p}{a b + c}$

$a+b/c$

$\frac{o/p}{a b c}$

$a \wedge b \wedge c$

$a+b-c$

Left Associative

$\frac{o/p}{a b + c}$

\wedge right associative

$\frac{r/p}{a b c}$
